## REAL "FUELLESS" DAYS ON THE EAST SIDE

By ELENE FOSTER

SHALL never forget Will Irwin's remark when he came home after several months spent at the Front and realized with amazement that there were people in the world who could still laugh.

"There isn't a smile in all

sppreciated his feeling as I sat in a Broaday car after a day spent amid the misery of East Side. I marvelled that the people the car could still laugh and be merry when here was all that suffering just around the orner, for it can be truly said that "there isn't smile in all the East Side." If you could the conditions there as I saw them you retild cease to wonder at the lack of smiles; our only wonder would be that the people had he courage to continue the struggle for exist-

War and the weather have combined to make conditions in this district worse (Oh, very much worse!) than they have ever been before. Do you realize that the population of that district which we know as "The East Side" is as great as that of the city of Boston? And do you realize the difference in the area overed by this section and the area of the city

If you do, then you have an idea of the conrestion on the East Side. And realizing this. you will have a slight idea of what the fuel duation must be in this district. It is a solmn fact that there are scores of tenement houses on the East Side in which there has en no gas or water or heat since the first old weather descended upon us the last of

Can you begin to get an inkling of the condition of the dwellers in these tenements? Do you know that for over a month they have not taken off their clothes night or day, and that hey live and sleep in rooms in which the racks of the windows and doors are stuffed with paper or rags so that not a breath of air

Can you imagine the condition of the plumbng in these tenements, where the pipes have een frozen all this time? And don't you marel at the fact that as yet no epidemic has esulted from all this?

Can you imagine what it must be like to live for days and days on dry bread, with now and then a slice of raw onion to make it palstable, and with not even enough fire to make a cup of tea? If you can comprehend a quarter part of the discomforts which these poor souls have been enduring you will understand what the shortage of coal means to them. The wonder of it is that there have been no riots uprisings, for this is just about the last maw on the back of a thoroughly weakened ad thoroughly disheartened camel.

We have all suffered in a greater or lesser egree from this shortage of coal, but it is the reat East Side district that has suffered the most; the people who have no facilities for storing any appreciable amount of coal, and who, even if they had the storage space, would never get enough money together to buy a ton of coal at once.

THE PROBLEM OF THE CELLAR DEALERS

These people are descendent on the cellar lealers for their supply of coal. These cellar calers, selling coal by the bag or basket, have intil very recently controlled the entire disribution for the tenement dwellers. The prices which they asked were fixed by cometition. The coal was sold by bag or basket, ever by weight.

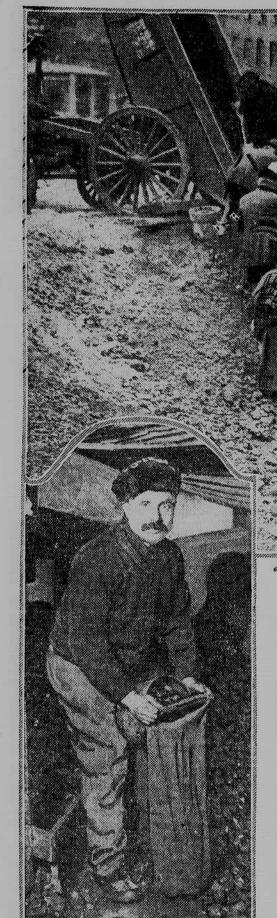

The cellar dealers were supplied by carters, who brought the coal to them from the coal ards. These carters banded together and Made their own prices for cartage, and the mlar dealer could pay these prices or go thout his coal. Before the Fuel Administraor took hold of the matter the carter was payog 89 per ton for the coal and charging the allar man \$3 per ton for delivering it. This made the price per ton \$12 for the cellar dealand, consequently, in order to make any Profit at all, he was obliged to charge what eemed to the consumer exorbitant prices for us coal.

Now, to remedy this, the Fuel Administrator steps in and ordains that coal shall be sold by he hundredweight, and that the price per hundredweight shall be 60 cents. So, you see, the cellar dealer is paying \$12 for two thouand pounds of coal and selling it for exactly what he pays for it if he sells it at the regulation price. In order to make any profit at all out of the transaction he pursues one of three ourses: he sells underweight, he mixes bits of ate or sand with the coal or he openly defies the law and charges more than he is allowed. the latter case the customer may demur and irgue, but in the end he usually pays the deal-'s price, knowing that if he makes any troue about it the dealer will refuse to sell him cal in the future.

The result, therefore, of fixing the price of oal at 60 cents a hundredweight was that twohirds of the cellar dealers on the East Side losed their cellars and temporarily retired from business. In this crisis the people could Pursue one of two courses: they could either to the coal yards or they could buy of the treet pedlers who sold coal, regardless of the aw, at prices ranging from 70 cents to \$1.25 er hundredweight.

Naturally they preferred to go to the coal ards. This accounts for the long lines of comen and children that one saw all through he snow-covered streets of the East Side, who tood for hours in the cold waiting patiently until the gate should be opened for retail disribution, for the wholesale customers had to attended to first.

Each person carried an empty burlap bag-

I say "carried," but on the coldest days these were used as a garment for extra warmth, sometimes wrapped about the feet and some-

training camp, "but can't you make one that doesn't stretch? They get all out of

shape in a jiffy." And straightway here is her

This is the origin of the stretchless sweater

shown on this page. Its story is interesting.

In a New York tea room recently a young

woman was making one. Taking advantage of

the freemasonry that exists among war knit-

ters, I promptly examined it. When I asked

why she had thus knitted it in this pattern,

instead of the regulation manner, she ex-

plained that her brother, who was in a South-

ern training camp, had complained that his

sweater stretched and got baggy and out of

shape so quickly. It was to overcome this dif-

ficulty that she had introduced frequent

strips of purling, which counteract, by fitting

STANDING IN THE COAL LINE I stood in one of these long queues, waiting outside a coal yard, when the thermometer was close to the zero point. At the end of a half hour I was well-nigh frozen; yet the people in front of me, much more thinly clad, had

times worn over the head as a sort of hood.

Many of the patient waiters had some sort of

vehicle in which to carry the coal to their

homes. The baby carriage was the favorite

delivery wagon, with the child's express cart a

close second. Sometimes a group of neighbors

combined and hired a pushcart to carry homo

their purchases.

The line was a very long one, and was "kept in order" by two burly policemen; but, bless you! there wasn't the slightest need for their services. There was nothing in the least disorderly in that long line of stolid, patient, long-suffering women and children. In point of fact there was scarcely a word spoken, barely a sound except now and again a cry from a child, whose feet ached with the cold, or a stifled groan from a woman whose body had become weary almost beyond endurance.

been there for two or three hours.

There were old, old women who looked far

too feeble to carry home the hundred pounds of coal when they received it; young mothers, with tiny babies folded to their breasts for warmth, and with two or three other children clinging to their skirts. And there were pale, anæmic, half-grown children, with the tired, world-weary expression on their faces which comes of sharing the family burdens and wor-

All in all it wasn't exactly a cheerful party, I can tell you! And sometimes, after all these hours of waiting, a dreadful thing happensthe coal gives out before the last of the line is served. This means another night of cold and misery for these people and an early start on the morrow, so that the experience will not be

THAT HUNGRY STOVE

An old Italian woman stood just ahead of me in the line and I got into conversation with

"How often do you have to come for coal?" I asked.

"I come to-day and not nexta day, but nexta day I come again," she replied. "My stova eat mucha ceal. She mucha hungry stova! Costa mucha mon!"

Backache and heartache, cold feet and hands

ings of the ashcan and refuse heap.

and endless patience-paid for the pick-

"Do you carry it yourself?" I asked, for she seemed very frail.

"Yes, miss; I liva up five flighta; I musta resta mucha, but I carry. My man he worka hard, maka mon forstova eat. Bada winter!" this with a shiver; and then she added, in the most pathetic tone, with her eyes raised to heaven. "Bada, bada war!"

By this time we had reached the coal distributer, and to her great relief the old woman's bag was filled. The ghost of a smile passed across her face as she deposited her 60 cents and raised the bag to her head to carry it in the real Italian fashion.

"Gooda-by," miss," she said. "Gooda lucka; you getta coal all righta."

I watched her as she balanced the bag and started up the street. She had gone but a few yards when a dire catastrophe befell her. The bag, worn thin with constant use, gave way and the coal came tumbling down all over the poor old soul. I rushed to her assistance and we mended the bag with two wire hairpins. (My Aunt Elizabeth says that there is nothing that can't be mended with a wire hairpin except a broken heart.) Then, while one of the big policeman kept the crowd away, we gathered up the precious bits and she went on her way rejoicing.

One has only to watch the progress of a dweller on the East Side as he walks along the street to realize that the subject uppermost and ever present in his mind is coal. He walks along with his eyes fastened on the pavements and in the gutters in search of a bit of the precious commodity. Every tiny bit is eagerly seized and dropped into pocket or bag. He even stops before the ashcans and pokes over the ashes for stray pieces. Down under the Williamsburg Bridge there is always a group of women dilligently going over the contents of the ash-barrels that stand there. Coal is to

too far," my caller announced with

these people the veritable "black diamond" of

Hitherto money has been the panacca for all the ills of the East Side, but this is the one emergency in which money is of little or no assistance. Of what use is money if there is no coal to be bought?

The Fuel Administration has done a great deal toward alleviating the suffering, but it has not yet reached a satisfactory solution of the coal problem. It has established offices in different parts of the city to aid in the distribution of coal to the people who need it the most. The office which covers the greater part of the East Side district is in the University Settlement Building, on Rivington Street.

Here people who are in need of coal, and who can no longer purchase it of their own cellar dealer, are registered and given a card to a dealer who has a supply of coal on hand. Every day inspectors go through the district, visiting all the cellar dealers to ascertain where there is coal to be bought. Dealers having a supply on hand are asked to honor customers bringing a card from the fuel administrator's office before giving coal to any other transient customers. .

Incidentally, these inspectors at the same time make sure that the dealer is asking the legal price for his coal, and that the big white price card, which the Fuel Administration has ordered to be tacked up in plain sight in every coal cellar in the city, hangs where the customers can see it. Often, very often, the dealer (quite by accident, he will assure you) has hung a burlap bag or a bushel basket over this sign, and he is greatly surprised when the inspector orders him to remove it.

Sometimes the Settlement has an opportunity to buy two or three tons of coal, and when this is the case it is sold at the office to the applicants. Families where there are very small children, invalids or very old people are given precedence, but it is often very difficult to know whether or not the applicant is telling the truth about the conditions at home.

A Russian woman came into the Fuel Administration office while I was there the other day who said she had six children.

"Where are they?" asked the inspector. "Are they all at home?" "Three are at home," was the answer. "I

took the others to Brooklyn." "What are they doing there; are they work-

ing?" "Oh, no," said the guileless one, "they are in

the cemetery."

Sometimes there is no money in the family exchequer with which to buy coal, if any is procurable. These cases are investigated immediately, and, if found worthy, there is a fund which has been given by philanthropic friends of the Settlement to cover their needs. In offices which have no such fund on which to draw there is what is known as "Mayor Hylan's Coal Fund," which is distributed for the same purpose.

TO REINSTATE THE CELLAR DEALER

Some ten days ago the Fuel Administrator inaugurated a system which aims to reinstate the cellar dealer and do away with the peddling on the streets. In each coal yard there is an inspector who interviews each carter as he is leaving the yard with his load. Each must tell to whom he is going to deliver the coal and how much he is charging for the cartage.

This information is recorded by the inspector and the carter is given a slip which he is to have signed by the dealer to whom he delivers the coal. The dealer keeps this slip and gives it to the policeman on the beat, who turns it in at Headquarters. Here clerks compare it with the slip which the coal yard inspector has also turned in to them, and if it does not tally the next time that carter applies for coal he will find the gates closed to him. This system seems to be working out very well, so well that a great many of the cellar dealers have opened

There is also another solution under consideration. This is to put the distribution of coal the hands of the Commissioner of Markets. By this system the city is to take over the coal supply and rent the yards from the coal companies. Carters are to be paid a specified sum for delivering the coal, so much per load per mile, and they are to deliver it to the cellar dealer, who pays the city for it. Of course, in this case the dealer would be obliged to give a \$50 or \$100 hond to the city before he is given any coal.

IMPRESSIONISTIC COAL SELLING

The crying need at the present time, of course, outside the lack of coal, seems to be more inspectors for the cellar dealers. In nine cases out of ten the dealer will cheat his customers unless he is carefully watched and the fear of the consequences implanted in his soul. It was only yesterday that I met an Italian woman in one of the side streets, south of Washington Square, who was carrying a dishpan full of coal.

"How much did you pay for that?" I asked

"Forty-five cents," she replied. I went to the cellar dealer across the street from whom she had bought the coal and asked him how many pounds he had put in the pan. He could speak no English, but his young son

interpreted for him.
"My father says he didn't weigh the coal, but he thinks about thirty pounds," said the

The woman had paid at the rate of \$1.50 per hundred pounds for that coal!

"Where is your price card?" I asked.

The boy pulled down the burlap bag which

covered it.

"My father just put the bag up there a minute ago," he said. "You can tell your father that if he covers that sign up again or sells coal for more than the price on that card he will be sent to pris-on!" I said.

This bit of information was passed on to the father, who immediately fell on his knees in the coal dust and prayed to the Madonna and all the saints to save him from such a fate.
"You see," remarked the son, "my father is a good man. He wouldn't cheat nobody. He

is always praying just like that." "I don't doubt your word." said I, "but here is 25 cents; I want to buy that burlap bag!"

The Old Women Seem To Be the Appointed Coal Scavengers of the Poor. It's a Dour Task

for an Old Back and Thin Blood These Bitter Days

▼ 7OULD you like to save 10 to 20 per cent on your butter and egg bill? We can tell you how to do it.

You will not be asked to carry your purchase home-a motor truck "manned" by women will deliver your order at your door.

You will be asked to pay cash; to order eggs in twelve dozen lots, (butter, one-pound prints) and to accept delivery at stated times—two days, one

This means forming a club of four or more in your immediate neighborhood or apartment. The chairman must place the orders, receive the goods and pay the bills.

The saving on eggs this week would be about 17 cents a dozen for No. 1 grade. We believe that this saving would average 10 cents a dozen the year round. If you use three dozen eggs a week (and you could afford to at this price) you would save \$15.60 a year on your eggs alone. We shall have economies along other lines to suggest later.

With your saving of \$15.60 you could get sixty-two Thrift Stamps. Just as good as so many bullets in Uncle Sam's cartridge belt-and he needs them. As to butter, we could to-day offer you No. 1 Creamery Butter for 55 cents. This grade would cost you about 64 cents in the average retail shops, offering you the service that the club members will get.

For further details and for help in organizing the club write to The

Tribune Institute, 154 Nassau Street, New York, or telephone the Organizer in charge of the Service Station, Morningside 8775. A personal economy; a chance to use freely on your table at reduced price two of the most valuable and vital foodstuffs; an opportunity to take part in

an economic experiment of basic interest to the public welfare; or the chance to turn the savings made into war savings. These are the opportunities offered

What you give is merely sustained intelligent interest and a minimum of cooperative effort.
